Primer HDV17-68 (AAT31151) is based on hepatitis delta virus (HDV) nucleotides 839-887. It was used with reverse primer HDV49-XC (AAT30850) for the PCR amplification of HDV sequences. A second primer pair, SIN-HDV (AAT31152) and SINZ76-SPE (AAT31153), is used to amplify a fragment contg. Sindbis 5' end sequences fused to HDV sequences. Overlapping synthesis is used in a second round of PCR using primers HDV49-XC and SIN276-SPE. The resulting construct contains the expression cassette elements HDV ribozyme/Sindbis 5'-end 299 nts/Sindbis junction region/Sindbis structural protein genes/Sindbis 3'-end untranslated region, designated pd5'26s. This was inserted into pcDNA3. Packaging cell line cassettes were constructed that allow inducible expression of structural proteins via alphavirus vectors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New recombinant alpha-virus vectors - used to develop prods and methods for use in gene therapy and in the prodn. of vaccines.

PCR primers AAV42367-420 and AAV42422-54 are used in the course of the invention. The specification describes a DNA alphavirus structural protein expression casette which comprises an inducible promoter and an alphavirus structural protein gene, where the promoter directs the expression of the alphavirus structural protein gene upon induction of the promoter within a cell, and where prior to induction within the cell, the expression cassette does not express sufficient quantities of structural proteins to be cytotoxic to a BHK cell containing the expression cassette. The products may be used to inhibit pathogens and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    primer SHDVIF (AAT30816) contains a buffer sequence allowing enzyme digestion, a SacI site, and a hepatitis delta virus (HDV) ribozyme sequence. It was used with nested primer HDV17-68 (AAT30817) and reverse primer SHDV84R (AAT30818) to generate an HDV ribozyme. This antigenomic ribozyme can be placed between the polyA tract at the 3' end of a Sindbis virus-based eukaryotic layered vector initiation system, ELVIS, and the transcription terminal signals to produce alphavirus expression vectors

system, based on Sindbis. The eukaryotic layered vector initiation system comprises a eukaryotic promoter 5' of viral CDNA which initiates, in a susceptible target cell, 5' to 0' viral CDNA which initiates, in a susceptible target cell, 5' to 0' synthesis of RNA from the viral CDNA. The RNA comprises a vector construct which autonomously amplifies in the call and expresses a heterologous nucleic acid sequence which encodes an antigen or modified form that stimmlates an immune response vithin an animal. The system is useful for stimulating an immune response to an antigen by introducing the vector inco target cells, preferably by infection in vivo, especially where the immune response is a cell mediated, HLA class I restricted or an HLA class II-restricted immune
The specifiaction describes an eukaryotic layered vector initiation
                                                                                                                                                                                                                                                                                                                                                                                             53.3%; Score 30.4; DB 2; Length 52; 59.4%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                PCR primers AAV42367-420 and AAV42422-54 are used in the course of the invention. The specification describes a DNA alphavirus structural protein expression cassette which comprises an inducible promoter and an alphavirus structural protein gene, where the promoter directs the expression of the alphavirus structural protein gene upon induction of the promoter within a cell, and where prior to induction within the cell, the expression cassette does not express sufficient quantities of structural proteins to be cytotoxic to a BHK cell containing the expression cassette. The products may be used to inhibit pathogens and stimulate an immune response
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Bukaryotic layered vector initiation system - containing eukaryotic promoter and heterologous antigen coding sequence, useful for stimulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           layered vector initiation system; stimulate; immune response;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PCR primers AAV60153-55 are used to amplify Hepatitis delta virus ribozyme sequence. The product is used in the course of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gapa

Bukaryotic layered vector initiation system - containing eukaryotic promoter and heterologous antigen coding sequence, useful for stimulating
                                                                                         Eukaryotic layered vector initiation system; stimulate; immune response;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PCR primers AAV60184-85 are used in the course of the invention. The specifiaction describes an eukaryotic layered vector initiation system, based on Sindbis. The eukaryotic layered vector initiation system comprises a eukaryotic promoter 5' of viral cDNA which initiates, in a susceptible target cell, 5' to 3' synthesis of RNA from the viral cDNA.
                                                                                                                                                                                                                                                                                                                                                       Dubensky TW
                                                                                                                                                                                                                                                                                                                                                                                                                                                Example 5; Col 108; 144pp; English.

                     cell and expresses a heterologous nucleic acid sequence which encodes an antigen or modified form that stimulates an immune response within an animal. The system is useful for stimulating an immune response to an antigen by introducing the vector into target cells, preferably by infection in vivo, especially where the immune response is a cell mediated, HLA class I restricted or an HLA class I restricted immune response. (Updated on 25-MAR-2003 to correct PR field.)
comprises a vector construct which autonomously amplifies in the

PCR primers AAV70745-46 are used to amplify part of the hepatitis delta virus (HDV) genome. The amplified product is used in the production of the alphavirus vector constructs of the invention. These constructs comprise a promoter 5' of viral cDNA which initiates the synthesis of RNA from the viral cDNA by in vitro transcription, followed by a 5' sequence which initiates transcription of alphavirus RNA, followed by a nucleotide sequence encoding alphavirus nonstructural proteins, a viral junction region which has been inactivated such that viral transcription of a subgenomic fragment is prevented, an internal ribosome entry site or a subgenomic which promotes ribosome read through between adjacent reading frames, and an alphavirus RNA polymerase recognition sequence. The recombinant alphavirus vectors can be used for gene therapy. (Updated on 20-MAR-2003 to correct PR field.)

/lab_nost="luba"|1008 - RescueMu (engineered from pBlueScript backbone); Site=1: BamHI; Site=2: Bg1II;
/sescueMu is a 4.9 kb, modified maize Mu transposon designed to allow plasmid rescue from total genomic DNA.
Mu elements insert preferentially into transcription units. For more information on RescueMu, go to the web site www.zmdb.iastate.edu and follow the links for NescueMu. Grid I was grown at Berkeley in 2001. DNA was extracted from leaf punches, double digested using BamHI and BgIII, and ligated to form circular plasmids. DH10B cells were transformed and then screened on LB plates with ampicillin."

/note="vector: PWD42nv; Purified genomic DNA from M.
musculus C57BL/6J (male) was obtained from the Jackson
Laboratory Mouse DNA Resources/documents/documents/
(http://www.jax.org/resources/documents/documents/). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was blunt end-repaired with T4 DNA polymerase and T4
polynucleotide kinase. Adaptor oligonucleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    His muscules (Craniata, Vertebrata; Euteleostomi; Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Eukaryota; Metazoa; Chordata; Sciurognathi; Murinae; Musinae; Euteleostomi; Mammalia; Euteleostomi; Sincola (Craniata; Euteleostomi; Eutel

                                                                                                                                                                                             8
10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWDA2 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli X110-Gold (Stratagene) cells and selected for ampicillin resistance."

Direct Submitted (31-MAR-2004) Weisshaar B., Max-Planck-Institut fuer
This sequence has been recovered from the left border of the T-DNA.
It indicates an insertion within the locus defined by BAC clone
It indicates an insertion within the locus defined by BAC clone
are described in References 1-3. The sequences are generated at the
MHI for plant Breeding Research in the context of the Gaplen-Kat
project GABI-Kat is part of the Garman Plant Genomics program
designated 'GABI'. Information on line availability can be found
at: http://www.mpiz.kceln.mpg.de/GABI-Kat/.

This sequence has been recovered from the left border of the T-DNA.

It indicates an insertion within the locus defined by BAC clone
T28J14. Details on the protocols used for generation of the
sequence are described in References 1.3. The sequences are
generated at the MPI for Plant Breeding Research in the context of
the GABI-Kat project. GABI-Kat is part of the German Plant Genomics
program designated 'GABI'. Information on line availability can be
found at: http://www.mpiz-veeln.mpg.de/GABI-Kat/.

/note="PCR was performed on DNA from Arabidopsis thaliana plants (T1) which were transformed with the T-DNA from vector pAC106 (GenBank accession number: AJ537513). The lines contain one or more T-DNA insertions. The DNA fragment(s) resulting from the PCR were directly sequenced to determine the genomic sequence flanking the insertion.
                                                                                                                                                                                                      CR360020 58 bp DNA linear GSS 05-APR-2004

//ac.nose="Nutlo" (amptorinin restriction")
//clone lib="Soares adult brain N2b5BB55"
//note="Organ: brain; Vector: pT713D (Pharmacia) with a modified polylinker; Site 1: Site 2: Boo Ri; laterand cDNA was primed with a Not I; Site 2: Boo Ri; lateranded cDNA was size selected, ligated to Boron adapters (Pharmacia), digested with Not I and cloned into the Not I and Eoc RI aites of a modified pT7T3 vector (Pharmacia). Library went through one round of normalization to a Cot = 53. Library constructed by Bento Soares and M. Fatima Bonald. The adult brain RNA was provided by Dr. Donald H. Gilden. Tissue was acquired 17-18 hours after death which occurred in consequence of a ruptured aortic aneurysm. RNA was prepared from a pool of tissues representing the following areas of the brain: frontal, parietal, temporal and occipital cortex from the left and right hemispheres, subcortical white matter, basal ganglia, thalamus, cerebellum, midbrain, pons and medulla."

E-mail enquiries: humquery@sanger.ac.uk Clone requestes: clonerequest@sanger.ac.uk

On Jan 27, 2001 this sequence version replaced gi:8218066.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em: EMBL; Sw., SWISSPROT; Tr., TREMBL; Wp., WORMPEP; Information on the WORMPEP database can be found at the properties of pacterial clone contigs of human chromsome 20, constructed by the Sanger Centre Chromosome 20 mapping Group. Further information can be found at thromosome 20, constructed by the Sanger Centre Chromosome 20 http://www.aanger.ac.uk/RGP/Chr20

RRP11-287820 is from the library RPC1-11.1 constructed by the group of bieter de Jong. Por futther details see http://www.chori.org/bacpac/home.htm

VECTOR: pBACe3.6 from the library RPC1-11.1 constructed by the group of bieter de Jong. Por futther details see http://www.chori.org/bacpac/home.htm

It currently consists of 41 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was fainished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMBL: Sw:, SMISSPROT: Tr:, TREMBL: WD:, WORMPEP; Information on the WORMPEP database can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Submitted (01-APR-2003) Wellcome Trust Sanger Institute, Hinxton, Submitted (01-APR-2003) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. On Apr 1, 2003 this sequence version replaced gi:28445802.

Sequence from the Mouse Genome Sequencing Consortium whole genome shotgum may have been used to confirm this sequence. Sequence data from the whole genome shotgun alone has only been used where it has a phred quality of at least 30.
                                                                                                                                                                 ö

Clones are derived from the bovine BAC library CHORI-240
(http://www.chori.org/bacpac/bovine240.htm). For BAC library
availability, please contact Pieter de Jong (pdejong@mail.cho.org).
Clones may be purchased from BACPAC Resources
(http://www.chori.org/bacpac/ordering.information.htm). This work
was undertaken as part of the International Bovine BAC Mapping
Consortium (IBBMC) by CSIRO Livestock Industries, Australia and the

Site_2: EcoRI; cDNA made by oligo-dT priming.
Directionally cloned into EcoRI/XhoI sites using the
following 5' adaptor: GGGACGG(G). Size-selected >500bp
for average insert size 1.8kb. Library constructed by
Ling Hong in the laboratory of Gerald M. Rubin (University
of Galifornia, Berkeley) using ZAP-CDNA synthesis kit
(Stratagene) and Superscript II RT (Life Technologies)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CB991305
